Assessment of recommendation response from Landskrona Fire Service

On 11 May 2022, the Swedish Accident Investigation Authority (SHK) published the report RS 2022:05, which deals with a fire that broke out in conjunction with the loading of waste onto a vessel in the Port of Landskrona.

A total of nine recommendations were issued in the report, one of which to the Landskrona Fire Service.

Recommendation RS 2022:5 R8

Analyse the rescue operation and, if necessary, develop the action plans for ship fires. Such plans should contain information that the Swedish Transport Agency's ship

inspector should be alerted at an early stage and what he or she can assist with.

The Landskrona Fire Service has responded to the recommendation and stated that they have analysed the rescue operation in accordance with their basic guidelines and have documented both positive and negative experiences. Regarding information about the Swedish Transport Agency's ship inspector, the Fire Service has stated that they have disseminated this information in their organisation and to RC South which manages central command for them.

SHK deems the safety recommendation to have been implemented (Concluded – satisfactory response).

Best regards,

Kristina Börjevik Kovaniemi
Chair Accident Investigations
